Hi, I'm *Reza* Adrian

Hi, I'm Reza! Someone who's genuinely driven by curiosity and creativity. I find joy in building things that work and look great on the web. Whether it's experimenting with a new tech stack or sketching out ideas for my next project, I love the process as much as the result.

Outside of code, I'm always up for new challenges, meaningful conversations, and spontaneous adventures. I believe that each day brings a chance to grow, connect, and create something worthwhile.

Past Ideas

Experience *Work*

From concept to creation, these experience reflect my journey.

May 2025 – Present

RZ

Intervyou.ai

📍 Malang, Indonesia

Developed an AI-powered Software as a Service (SaaS) platform focused on interview preparation and CV optimization, integrating Gemini API for real-time feedback and performance analysis. Enabled users to simulate job interviews and receive tailored suggestions to improve job readiness. Engineered scalable and responsive web applications using Next.js, Tailwind CSS, and TypeScript, ensuring seamless UX across devices. Implemented structured design systems via Shadcn/UI to maintain consistency and rapid development.

Built secure and efficient backend services with MySQL and Prisma ORM, handling dynamic resume data, user profiles, and analytics with optimized queries and data structures. Integrated payment gateway using Midtrans API, enabling smooth and secure transaction flows for premium services.

Established component-based architecture and API integration best practices, reducing technical debt and enhancing maintainability across codebases. Collaborated with product and design teams using Agile methodologies, conducting sprint planning via Linear and streamlining communication through Slack.

Apr 2025 – Present

PT. Transpo Indonesia Mandiri

📍 Malang, Indonesia

Built a web-based vehicle rental and urban transit platform designed to digitize public transportation systems, including angkot and bus routes, via the TRANSPRO application.

Developed core features such as multi-destination trip planning, automatic vehicle allocation based on passenger capacity, and real-time service area validation using Google Maps API.

Utilized Next.js, TypeScript, and Tailwind CSS to architect performant, responsive web interfaces, while leveraging Shadcn/UI for scalable component design.

Designed and maintained backend infrastructure with MySQL and Prisma, ensuring reliable data flow across booking systems, route calculations, and user management.

Collaborated with cross-functional teams in a fast-paced startup environment, delivering continuous improvements aligned with user needs and transport regulation requirements.

Contributed to system architecture decisions, emphasizing maintainability and scalability to support long-term platform growth.

Currently *Work*

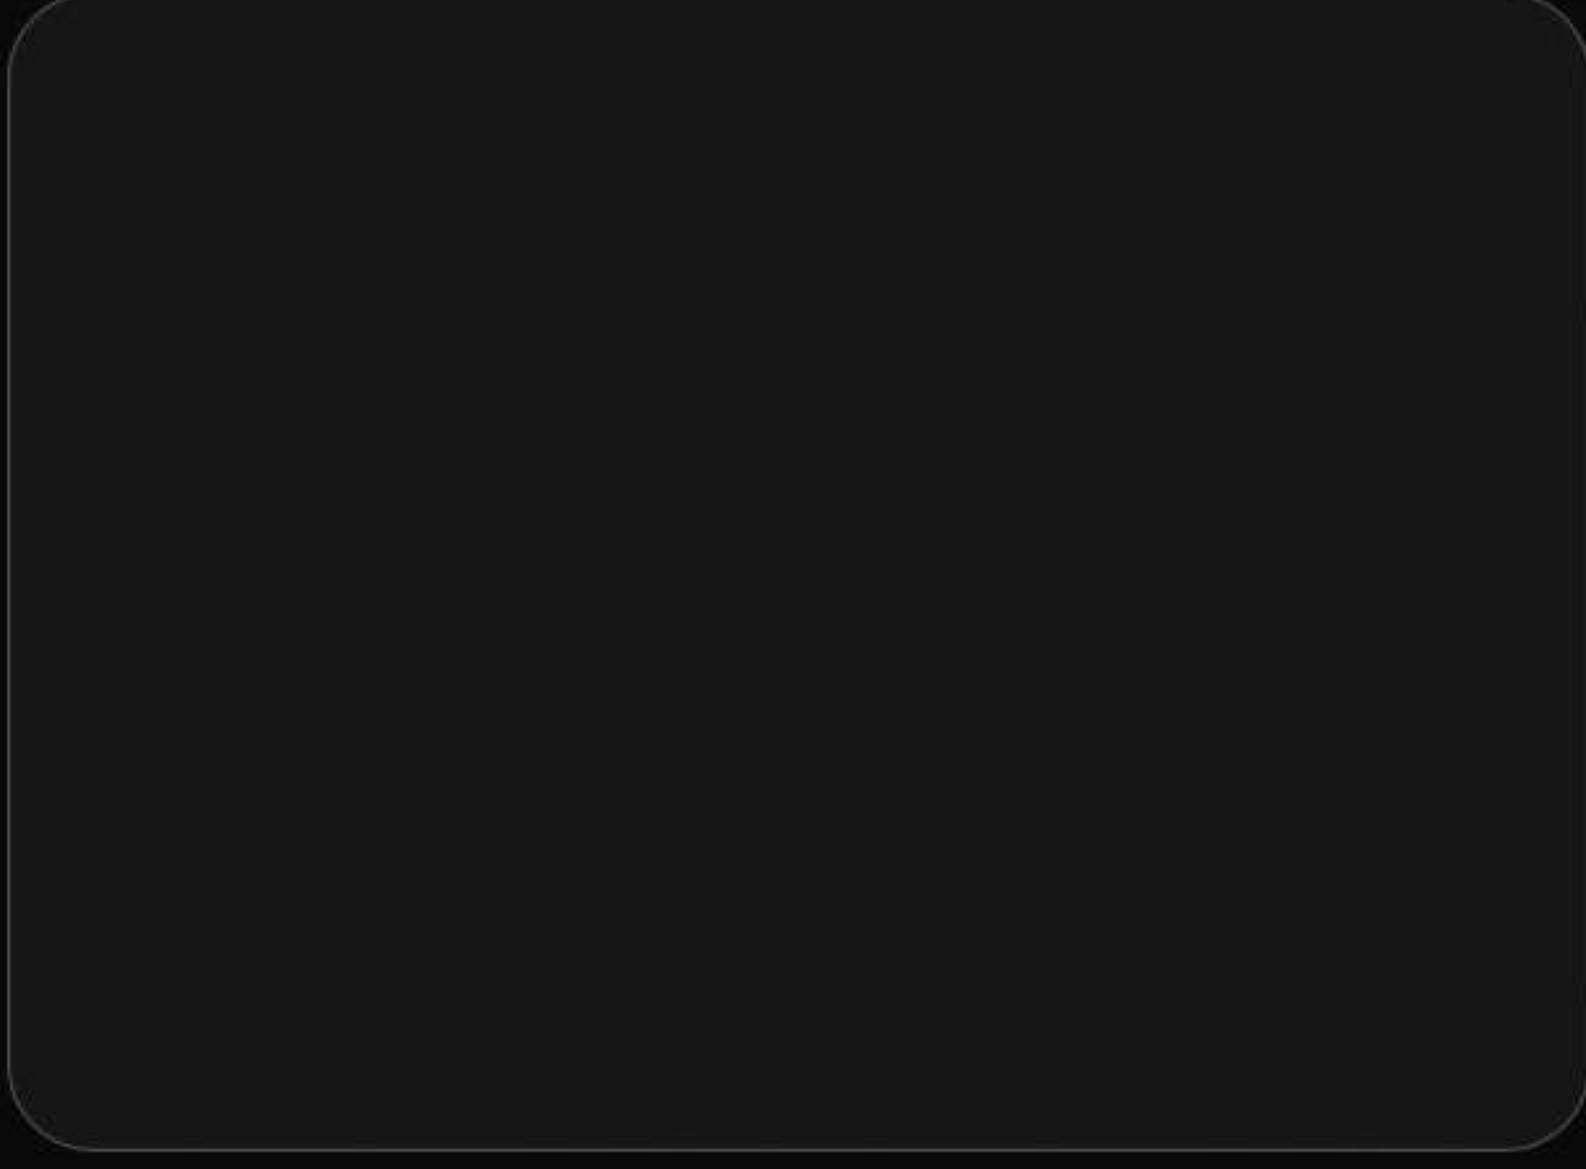

This is some of my projects that I have done and currently working on.
Let's start collaboration now.

— Transpo

Transpo is a web-based vehicle rental platform that also offers curated travel packages. It features multi-destination selection, automatic vehicle count calculation based on passenger capacity, and service area validation powered by Google Maps API.

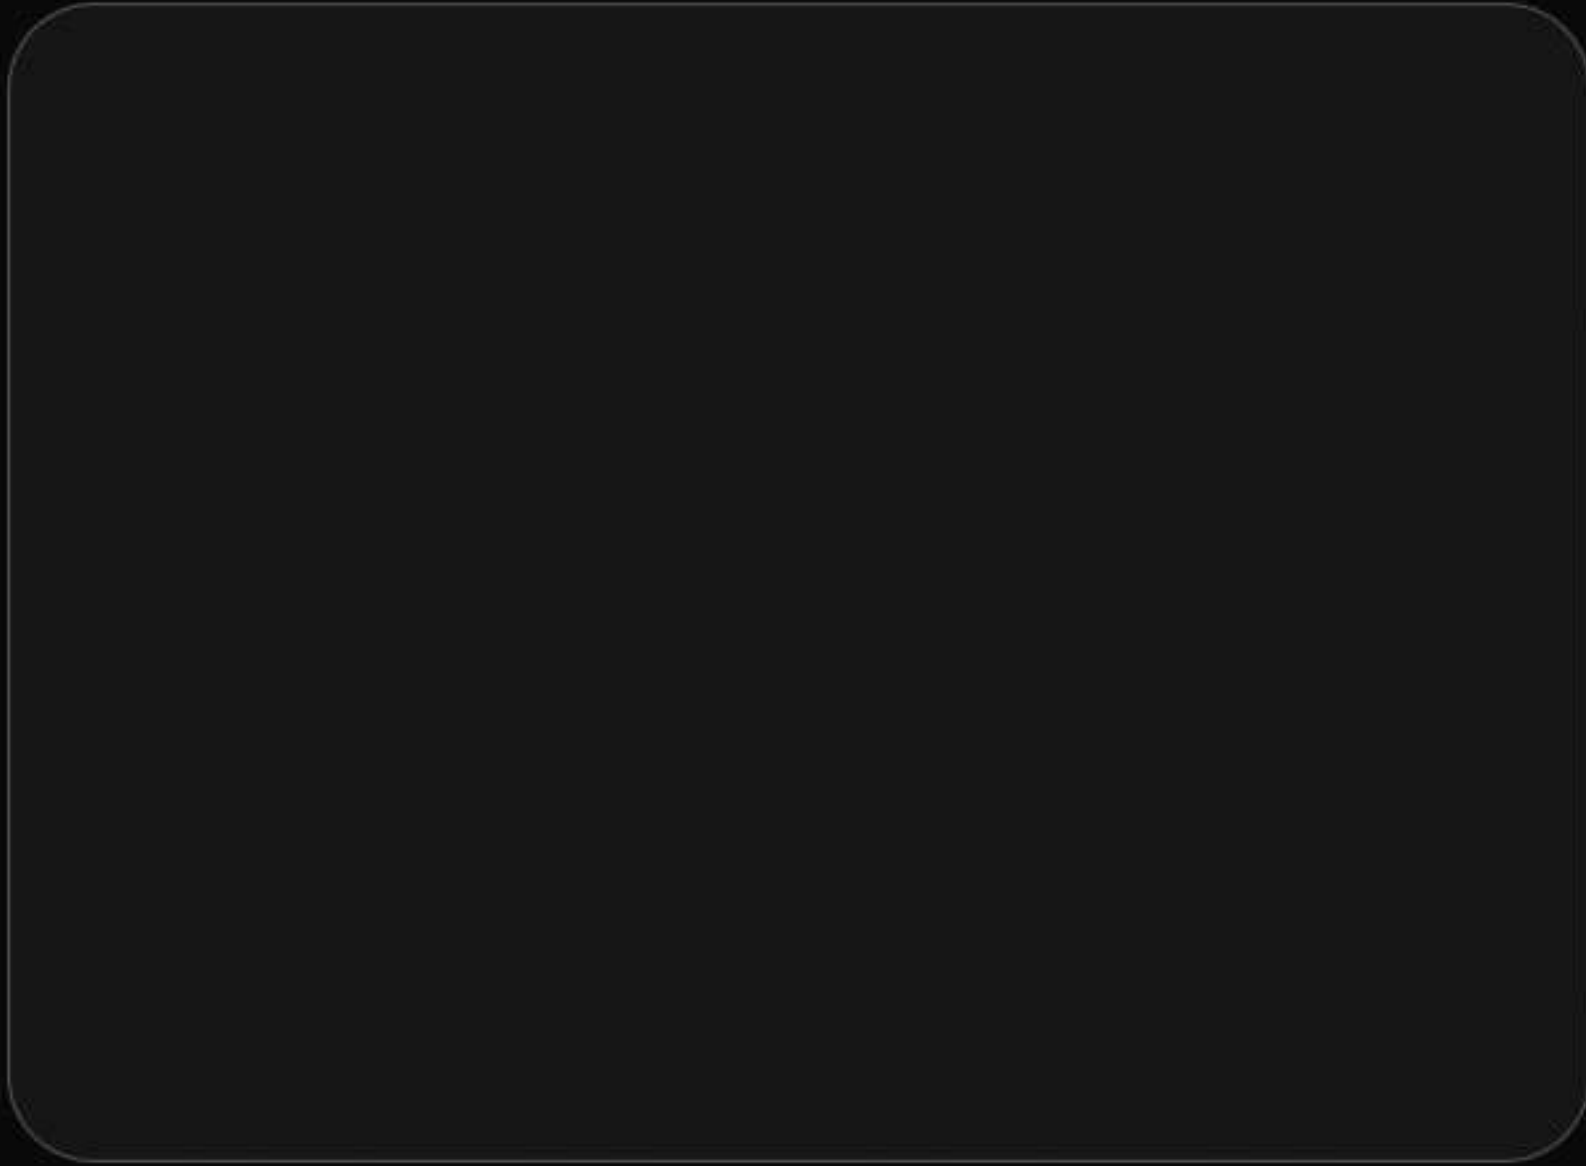

- Tailwind CSS
- Next.js
- TypeScript
- Shadcn/ui
- MySQL
- Prisma
- Google Maps API

— Intervyou

Intervyou is an AI-powered platform for interview training and CV optimization. With Gemini integration, users can simulate job interviews and receive real-time feedback to improve their performance and resumes. Seamless payments are handled via Midtrans.

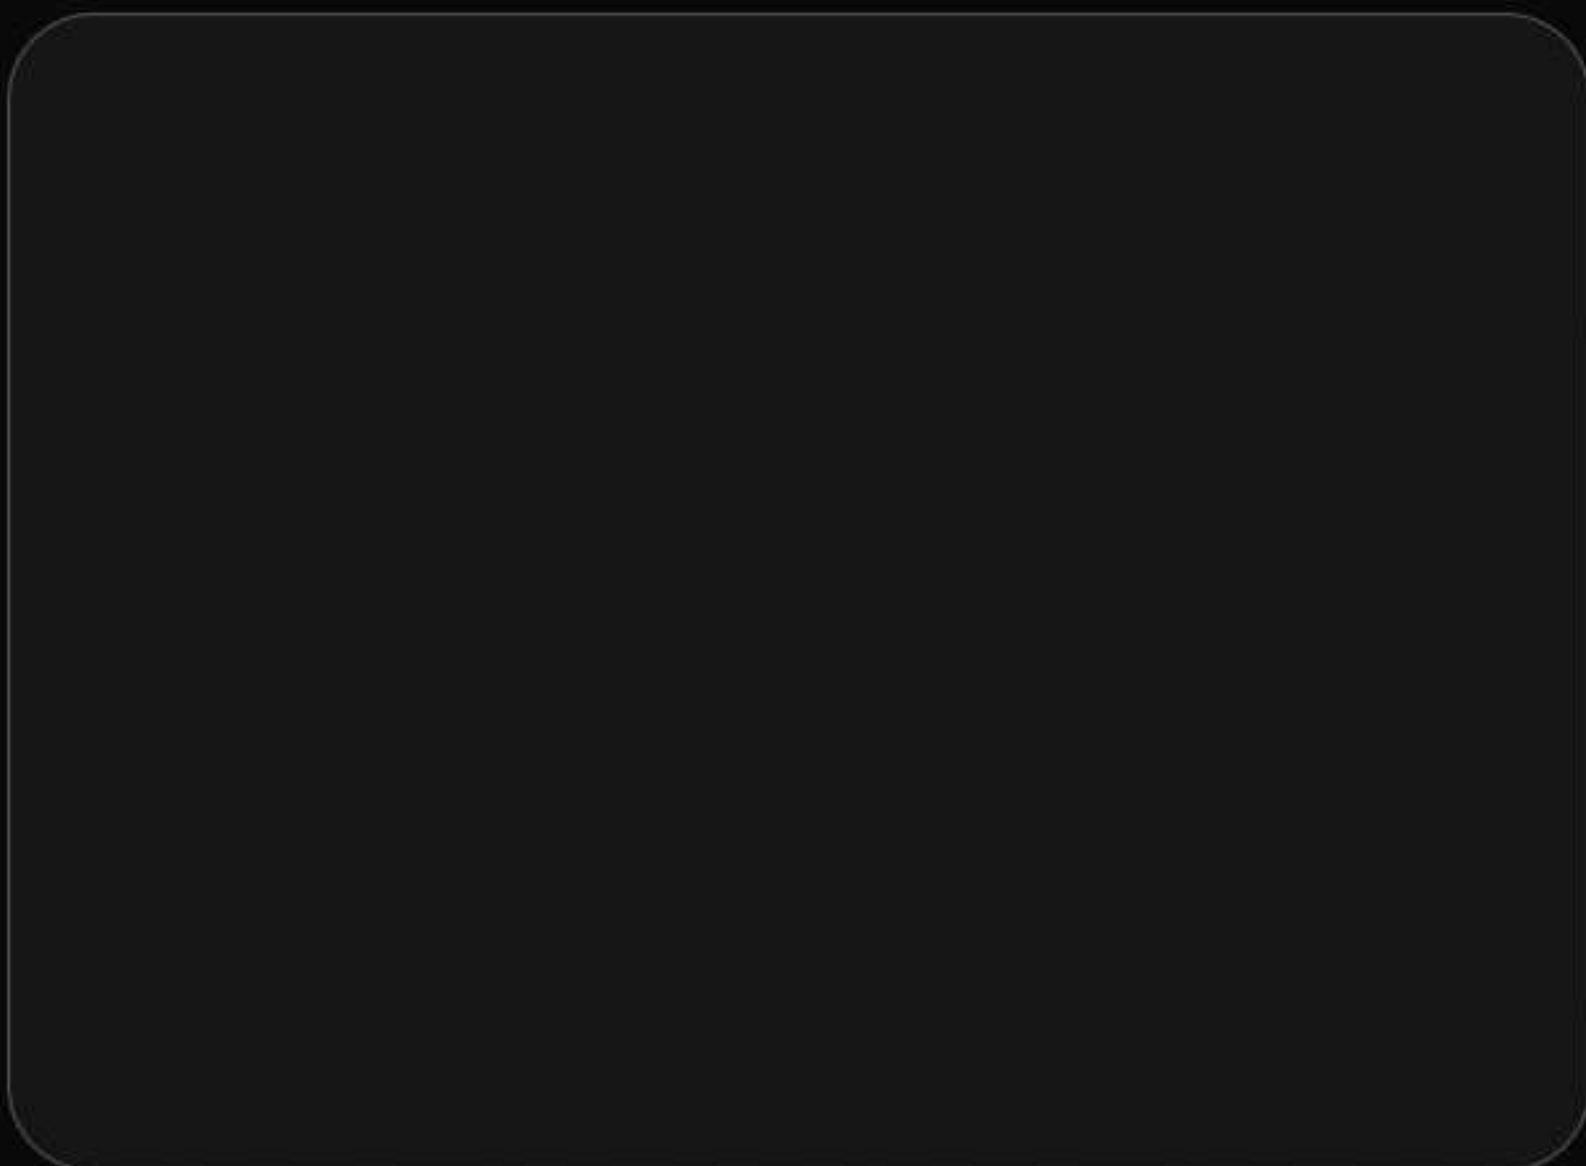

- Tailwind CSS
- Next.js
- TypeScript
- Shadcn/ui
- MySQL
- Prisma
- Gemini API
- Midtrans

— Alpha Kids

Alpha Kids is an educational platform designed to prepare elementary school students for academic olympiads. It offers interactive tryouts and bundled question packages that students can purchase and practice with at any time.

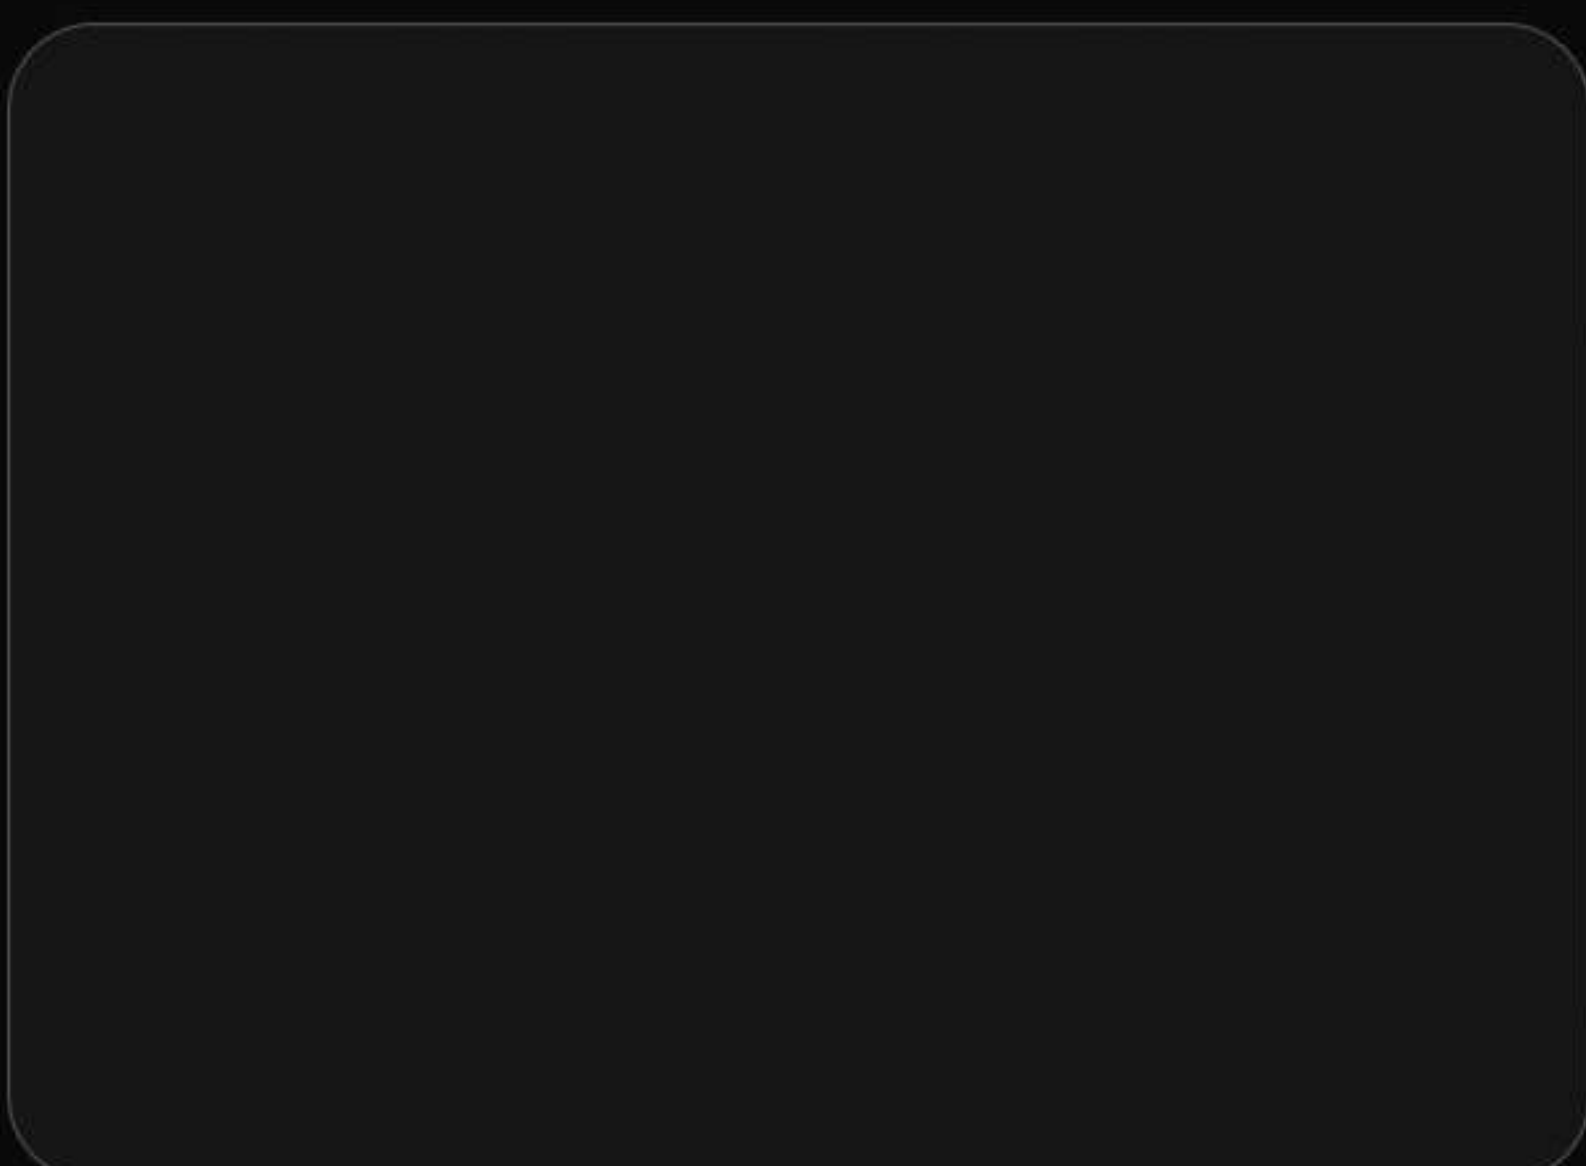

- Tailwind CSS
- Next.js
- TypeScript
- Shadcn/ui
- MySQL
- Prisma

— Zecville Que La Vinci

Zecville is an e-commerce platform focused on selling premium hoodies with unique designs and strong branding. It features a clean and responsive interface with secure payment processing through Midtrans.

- Tailwind CSS
- Next.js
- TypeScript
- Shadcn/ui
- MySQL
- Midtrans

— LBC Laundry Management

LBC is a laundry management application that helps track operational workflows and allows customers to check the real-time status of their laundry. It also includes an ETA prediction feature that estimates when the laundry will be ready, based on current queue conditions.

- React.js
- Express.js
- JavaScript
- MongoDB
